

Operating the flashlight and battery replacement

Switch on the flashlight by pressing the button on the flashlight ending.

When changing the batteries, unscrew the flashlight ending, remove the battery holder and insert **3 alkaline or lithium** batteries type **AAA** (triple-A, LR03). Mind the **correct polarities** which are marked on the sides of the battery holder (two batteries are always pointed in the same direction while one is pointed in the opposite direction).

After that, insert the battery holder back inside the flashlight – in the direction of the arrow on the side of the holder. The correct placement of the holder can also be seen in the picture above. Carefully screw back the ending.

Do not shine directly into eyes!

This is not a toy for children.

- Length: 113 mm • Weight: 126 g (incl. batteries)
- Head diameter: 33 mm • Body diameter: 27 mm
